# Robel A. Sebhat

San Jose, CA 95138 | Robelsebhat2@gmail.com | (408) 677-0667 | https://github.com/Robel-S

## PROFESSIONAL SUMMARY

Full-stack developer and Computer Science graduate from San Jose State with demonstrated experience building end-to-end web applications using React, TypeScript, Python, FastAPI, Spring Boot, and PostgreSQL. Skilled in RESTful API design, secure authentication, relational database modeling, and containerized deployment with Docker.

## EDUCATION

**San Jose State University** San Jose, CA

*B.S. Computer Science, Summa Cum Laude, GPA: 3.9/4.0* *May 2026*

## PROJECTS

***RecFinder*** Mar 2026 – May 2026

*React, TypeScript, Python, FastAPI, PostgreSQL, Docker*

- Built a full-stack AI-powered recommendation platform with a partner, delivering personalized suggestions for movies, TV shows, books, and games via Google Gemini integration.
- Designed and implemented RESTful APIs with Python, FastAPI, and SQLAlchemy to manage users, media libraries, and recommendation requests.
- Implemented secure authentication and authorization using JWT, and bcrypt password hashing
- Containerized a multi-service architecture using Docker Compose to orchestrate frontend, backend, and PostgreSQL database services.

**Endangered Species Tracker** Oct 2025 – Dec 2025

*React, Spring Boot, MySQL, Python*

- Built a full-stack web application that visualizes endangered species distributions across a React frontend and Spring Boot backend using Google Maps API.
- Engineered Python preprocessing scripts to reduce dataset size by gigabytes across 6,000+ species records by averaging polygon data into center points and splitting wide-area polygons into smaller regions.
- Designed and managed a MySQL database with over 6000+ species designed to handle frequent API calls.
- Developed RESTful APIs supporting user-submitted wildlife sightings and administrative review workflows with secure data handling.

**Movie Rental System** Apr 2025 – May 2025

*Java, JavaFX, SQLite*

- Built a desktop movie rental application enabling users to browse, rent, return, and search movies using JavaFX.
- Designed and implemented an SQLite database schema for users, inventory, and rental transaction tracking.
- Developed CRUD-based backend logic for authentication, inventory updates, and rental lifecycle management.
- Implemented filtering and search functionality to improve movie discovery and user experience.

## SKILLS

**Languages:** JavaScript, TypeScript, Python, Java, SQL, HTML, CSS

**Frameworks:** React, FastAPI, Spring Boot

**Databases:** PostgreSQL, MySQL, SQLite

**Tools:** Docker, Git, GitHub
